What is The Digital Nomad Movement?

How it all started...

The Digital Nomad Movement started when travelers wanted to sustain their income using the internet so they could keep traveling instead of getting a job in one destination.

Most worked as freelancers or entrepreneurs as it was rare for companies to offer remote work and allow people to work from anywhere.

Many digital nomads preferred financial and location freedom so it became popular, especially since the internet became more accessible.

Since the pandemic, people with full-time jobs can work from home and/or travel while they work.
